

## MammoView

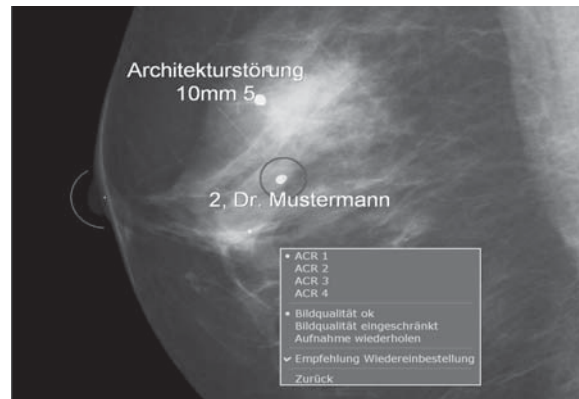

**Digital mammography results effective + flexible:**

- Extremely easy to use and manage
- Access to all images (including previous images) in seconds
- Direct findings in the image
- Hanging protocols can be configured individually to automate your routine procedures
- Outstanding image quality (2048 greyscale)
- Excellent price/performance ratio

## DIGITAL IMAGES ARE OUR WORLD

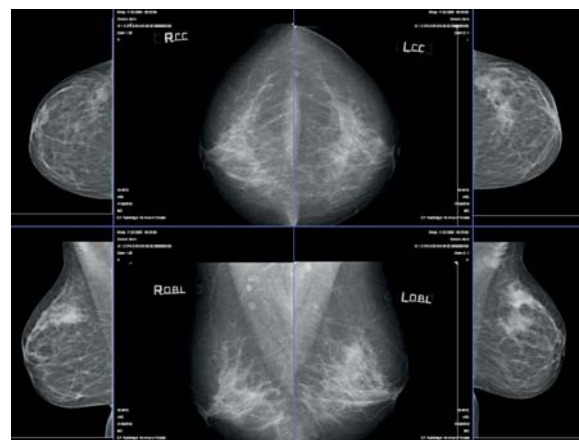

medigration MammoView is an easy to use, cost effective examination and analysis system for curative mammography as well as mammography screening (fulfils PAS 1054). The enormous degree of flexibility and a high standard of quality ensure future-proof mammography solutions which are made to measure. A high integration capacity with all digital modalities (multimodality) is guaranteed through the strict implementation of the DICOM Standard.

Direct findings in the image

### Specialist tools

Use the opportunity to record your findings directly in the image concerned by means of pre-set, standardized options. Careful inverting of the breast enables the contrast of the image to be brilliantly displayed and improves visibility of lesions. Furthermore, with the help of symmetric hanging, all corresponding images can be equally adjusted, scaled and windowed. We are happy to define individual hanging protocols (especially for previous images) according to your specific requirements.

Hanging protocols can be configured individually (including previous images)

### Quick and effective handling of images

The unique pyramid compression enables a zero delay working procedure with all available data. Complex series of images can be displayed in seconds. The asynchronous transmission of the captured images onto the screening archive as well as the secure encrypted online transfer (optional) means MammoView is extremely flexible. We guarantee a seamless, stable and efficient work flow.
